RUST PROTECTION

RUST PREVENTIVE 6000: A thin film, water displacing, solvent based rust preventive intended to provide a thin almost invisible film on steel parts and having protection for a term of six months.

RUST PREVENTIVE 6004: A thin film, water displacing, solvent based rust preventive. It's higher flash point makes it a safer product and worker friendly, with the same invisible film protection.

RUST PREVENTIVE #2: A thin film, water displacing, solvent based rust preventive intended to provide a thin almost invisible film on steel parts and having protection for a term of six months.

RUST PREVENTIVE 1500: A clear liquid rust protective, non petroleum synthetic designed to yield excellent corrosion protection on all steel parts, including cast iron. It can be used as a dip, in a vibratory unit or added to a rinse tank of a washing line. Amount of protection depends on the concentration of use. Use rate: 1% – 10%.

RUST PREVENTIVE BAC: A clear liquid rust protective, non petroleum synthetic designed to yield excellent corrosion protection on all steel parts, including cast iron. It can be used as a dip, in a vibratory unit or added to a rinse tank of a washing line. Amount of protection depends on the concentration of use. Use rate: 1% – 10%.

RUST PREVENTIVE 926: An emulsifiable rust preventive offering long term protection but also providing the safety of dealing with a non combustible rust preventive. Dilutions of 5-1 up to 10-1 are suggested.
